## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1, 5-10, 12-18, and 20-25 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art does not disclose or fairly suggest a in-mold label comprising a core layer with a first and second surface and a heat seal layer positioned on the first surface of the core layer, wherein the heat seal layer comprises a polyolefin comprising a copolymer of (a) ethylene, propylene or butylene, and (b) an olefin comonomer having from about 3 to about 10 carbon atoms and wherein (a) and (b) are different, wherein the polyolefin has a peak melt temperature of less than about 110<sup>0</sup>C and wherein less than about 25% of polyolefin melts at a temperature of less than 50<sup>0</sup>C as measured by differential scanning calorimetry. The closest prior art the examiner has been able to locate is Ohno et al. (US 5,811,163). Ohno et al. disclose an in mold label which has a thermoplastic resin film base layer (core layer) and a heat sealable resin layer (abstract). The thermoplastic film base layer (2) has two surfaces, wherein the heat seal layer (4) is positioned on what will be considered the first surface of the thermoplastic resin film base layer (col. 2 lines 38-41 and fig. 1). The heat sealable resin layer comprises as the main component an ethylene/ $\alpha$ -olefin copolymer obtained by copolymerizing ethylene and an  $\alpha$ -olefin having from 3 to 30 carbon atoms using a metallocene catalyst (col. 3 lines 68-62). While Ohno et al. is similar to the instant application in many respects, there are clear patentable distinctions. Ohno et al. does not disclose a particular polyolefin copolymer having a peak melting point

Art Unit: 1794

of less than about 110<sup>0</sup>C and less than 25% of the polyolefin melting at less than 50<sup>0</sup>C. This specific polyolefin copolymer of the applicant would not have been obvious to one of ordinary skill at the time of the invention, because the specific polyolefin copolymer of the applicant has specific thermal properties that have not been discovered by routine experimentation. The specific polyolefin copolymer of the applicant has been discovered to solve the problems of plate-out, as well as other problems experienced in the in-mold manufacturing process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
